

# Bloody Mary's

## Blood Bank

*By: Matt Pitman, Jane Trapala, Hassan Bhatti, & Troy Durand*

*She Thirsty Bruv*

# Project Idea

Database System will consist of tables with information on patients, data of the blood donors, data of the nearby blood banks.

1. Recipient's Table: Name, ID, Disease, Address, Phone No., Receiving Date, Urgency Status
2. Donor Table: Name, ID, Blood Type, Address, Phone No., Donation Date,
3. Blood Bank Table: Contact Info, Address, Name
4. Staff Table: Staff ID, Staff Name, Address, Phone No., Shift
5. Blood Type: A+/-, B+/-, O+/-, AB-/+

Our project will implement and deal with different scenarios that could occur when dealing with blood

# Data Sources

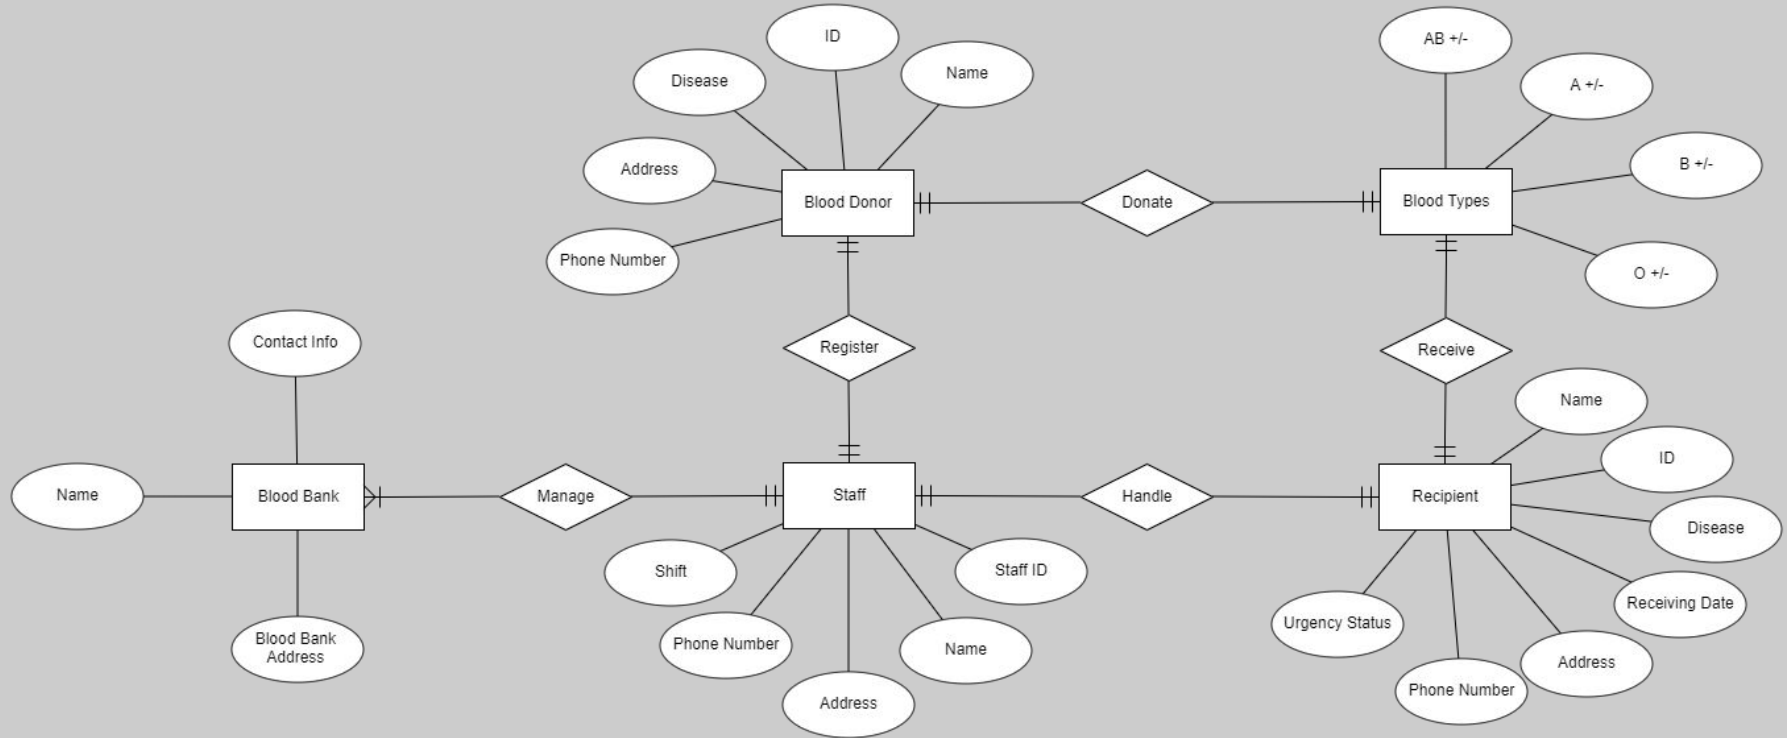

As blood banks don't release patient records, we would have to produce our own values whenever a patient is needed.

We can take information about nearby blood banks nationwide based on the results in Google Maps

# Possible Transactions

- Add a patient if a new one is in need of blood
- Remove a patient if one has received blood
- Add a donor if a new person gives blood
- Change data of a blood bank if some attribute changes
- Update the available blood
- Update who has received blood and where

# ERD Table w/ Attributes

# Recipient's Table

- Patient's Name
- Patient's Identification
- Patient's Disease
- Patient's Hospital's Address
- Patient's Age
- Patient's Gender
- Urgency Status
- Nature of Urgency
- Blood Type

# Donor Table

- Patient SSN
- Patient Name
- How many times donated
- Most recent donation date
- Blood Type
- Donor Address
- Contact Number
- Recent Travels (specific countries)
- Any pre-existing conditions/diseases

# Staff Table

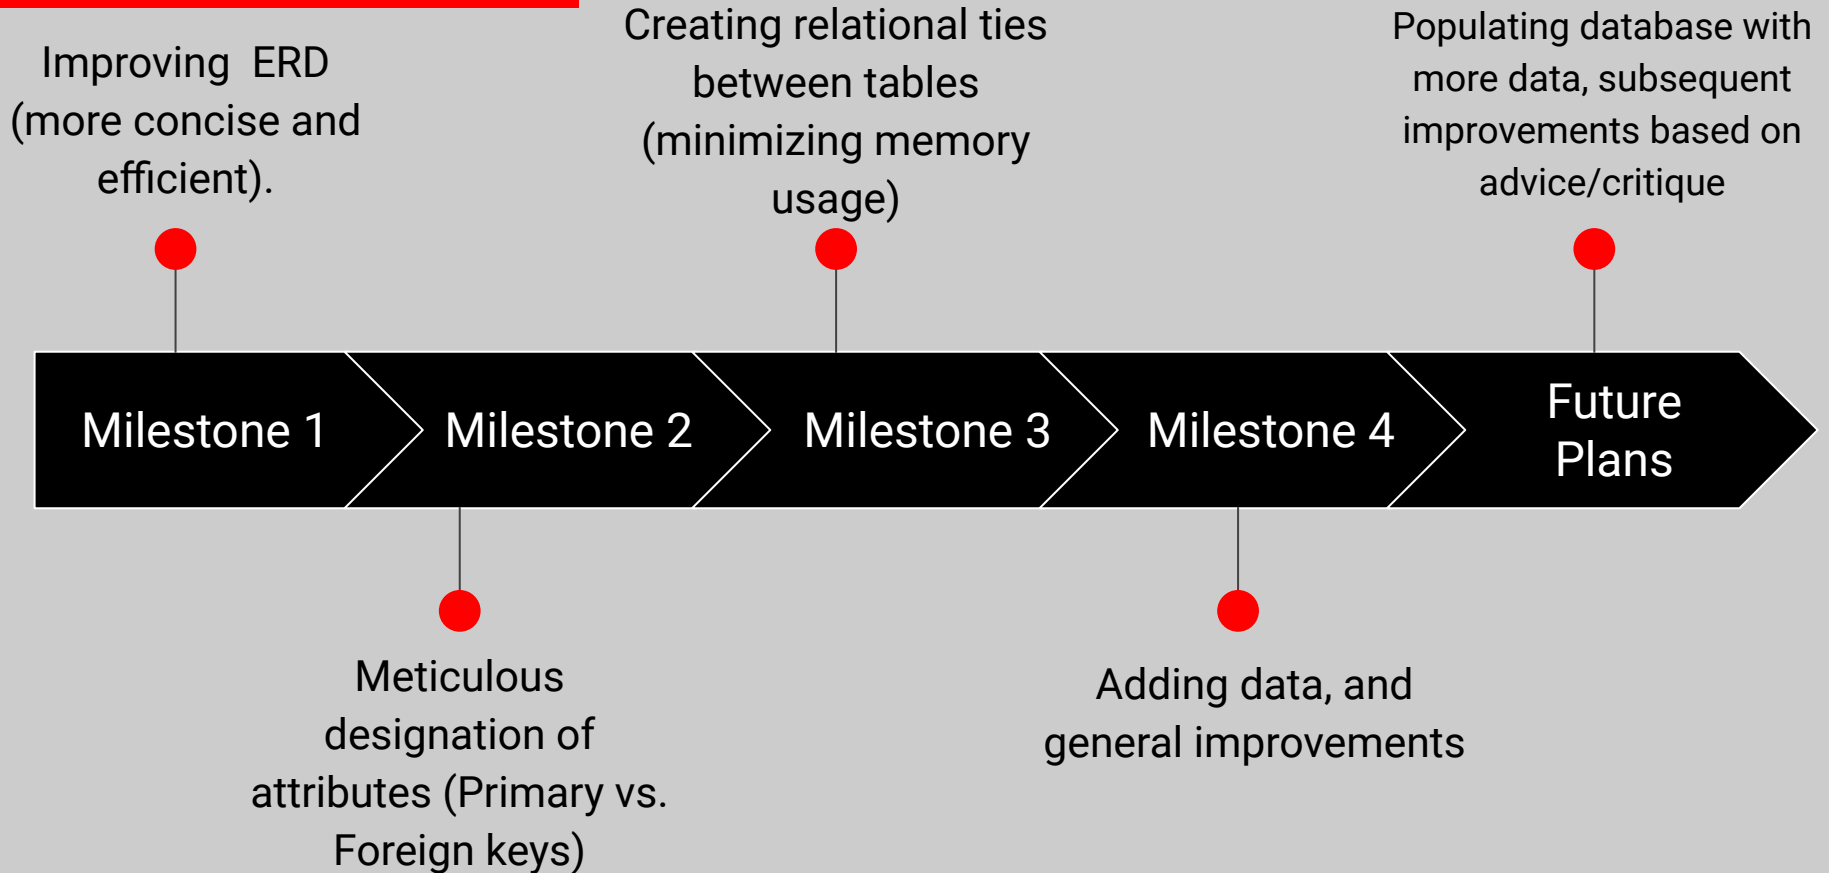

- Staff ID
- Staff Name
- Address,
- Phone No.,
- Salary
- Shift

# Blood Bank Data

- Blood Bank Contact Info
- Blood Bank Address
- Blood Bank Donor Names (All time list of Donors)
- Blood Bank Name
- Blood Drive Sites
- Hospitals

## Overall Progression Map

# Thank you!

Please, feel free to ask us any questions!
